

standard

Materials
- Non-toxic, clear, thermo sensitive siliconised PVC which gets soft when warm

Features
- 33cm length, size is the internal diameter in mm

Parts
- All tubes are fitted with 15 mm standard connector, which insures compatibility with circuit connectors
- Smooth tip aids atraumatic intubations
- Full-length radio-opaque line to assess exact location of tube 1 cm graduation markings to ascertain insertion depth
- 2 cm indicator mark assists positioning of tube past the vocal cord
- Latex free

cuff pressure

- above 18 mmHg to reduce aspiration
- below 25 mmHg to minimize the risk of pressure necrosis
- Patients whose peak airway pressures exceed 48 cmH2O will require cuff pressures greater than 25 mmHg in order to avoid a cuff leak.

intubation depth $\text{length (cm)} / 10 \times \text{ID (mm)} = (16 + \text{age}) / 4$
- If unsure choose size of the pinkie
